SUMMARY

Computer Engineering graduate specialized in Artificial Intelligence, with hands-on experience across backend API development, ML model serving, RPA/AI automation, and quality assurance. Comfortable shipping production-minded systems in both Python (FastAPI) and Java (Spring Boot) — from REST/Kafka services and ONNX model inference to test automation, audit logging, and cloud deployment on AWS.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, SQL

Backend / API: Spring Boot, FastAPI, Flask, REST, Kafka, Pydantic, SQLAlchemy, Hibernate/JPA, Alembic, Flyway

AI / ML: scikit-learn, TensorFlow/Keras, ONNX Runtime, OpenCV, model evaluation & serving

Automation / QA: UiPath, G1ANT, Selenium, functional/regression/exploratory testing, Jira, Confluence

Cloud / DevOps: AWS (ECS Fargate, RDS, MSK), Terraform, Docker, GitHub Actions CI/CD, Prometheus/Micrometer

Databases: PostgreSQL, SQLite

EXPERIENCE

Lionbridge Games — Software Tester

Warsaw, Poland · Sep 2025 – Jul 2026

- Execute functional, regression, exploratory, and cross-platform testing to verify product quality, stability, and release readiness.
- Report and track defects in Jira/Confluence with clear reproduction steps, expected vs. actual results, and supporting evidence.
- Collaborate with developers, designers, and QA teams to validate fixes, extend coverage, and improve product quality.

Rhenus Workforce — RPA / AI Developer Intern

Warsaw, Poland · Apr 2025 – Jun 2025

- Built automation and AI solutions using Python, UiPath/G1ANT, and workflow automation for business process improvement.
- Analyzed business workflows and translated operational needs into technical automation tasks, demos, and solution prototypes.
- Partnered with business and technical stakeholders on scenarios involving data handling, document processing, and process efficiency.

PROJECTS

JInfer — JVM ML Inference Gateway — Java 21, Spring Boot 3, ONNX Runtime, Kafka, PostgreSQL, AWS, Terraform

- Built a Spring Boot (Java 21) service that runs ONNX-exported ML models in-process on the JVM — no Python in the request path — over both REST and Kafka.
- Modular-monolith design with API-key roles (READ/PREDICT/ADMIN) and PostgreSQL/Flyway persistence of every request and result for a fully auditable inference history.
- Production-ready: Prometheus metrics, OpenAPI/Swagger, Testcontainers tests, Docker Compose, GitHub Actions CI/CD, and Terraform AWS infra (ECS Fargate, RDS, MSK).

OptimaTime AI — Productivity & Scheduling Platform — FastAPI, React, scikit-learn, SQLAlchemy, Alembic

- Developed an AI-powered task scheduling platform with ML-based prioritization and heuristic scheduling that produces explainable planning recommendations.
- Delivered full-stack execution across REST APIs, machine-learning integration, database design, and explainability for user-facing productivity workflows.

Intelligent Invoice & Email Automation Platform — Python, FastAPI, SQLAlchemy, Alembic, Pydantic

- Built an automation platform for email-driven invoice intake, validation, supplier management, approval workflows, and audit-ready processing.
- Implemented REST APIs with API-key protection, audit logging, PDF magic-byte validation, idempotent uploads, invoice revalidation, stale-approval expiry, and duplicate prevention.

EDUCATION

Vistula University

Warsaw, Poland · Mar 2026

B.Eng. in Computer Engineering — Specialization in Artificial Intelligence

CERTIFICATIONS

AWS Certified Machine Learning – Specialty · IBM Machine Learning with Python · Microsoft Advanced AI & ML Techniques and Capstone

LANGUAGES

Arabic — Native · English — Fluent · French — Fluent
