SUMMARY

Computer Engineering graduate specialized in Artificial Intelligence, with hands-on experience in quality assurance, Python automation, backend APIs, and RPA/AI workflows. Experienced in testing, defect reporting, business process automation, and building production-minded projects involving validation, security, audit logging, and machine learning integration.

TECHNICAL SKILLS

Programming: Python, JavaScript, Java, SQL

Backend/API: FastAPI, Flask, REST APIs, Pydantic, SQLAlchemy, Alembic

Automation/QA: UiPath, G1ANT, Selenium basics, Jira, Confluence, functional, regression, exploratory testing

AI/ML: scikit-learn, TensorFlow/Keras, OpenCV, model evaluation, AWS ML concepts

Tools/DB: Git, Docker basics, CI/CD basics, PostgreSQL, SQLite

EXPERIENCE

Lionbridge Games - Software Tester

Warsaw, Poland

Sep 2025 – Present

- Executed functional, regression, exploratory, and cross-platform testing to verify gameplay quality, stability, and release readiness.
- Reported, documented, and tracked defects in Jira/Confluence with clear reproduction steps, expected results, actual results, and supporting evidence.
- Collaborated with developers, designers, and QA teams to validate fixes, support test coverage, and improve product quality.

Rhenus Workforce - RPA/AI Developer Intern

Warsaw, Poland

Apr 2025 – Jun 2025

- Supported automation and AI solution development using Python, UiPath/G1ANT, and workflow automation concepts for business process improvement.
- Analyzed business workflows, assisted with demos and solution preparation, and translated operational needs into technical automation tasks.
- Collaborated with business and technical stakeholders on automation scenarios involving data handling, document processing, and process efficiency.

PROJECTS

Intelligent Invoice & Email Automation Platform

- Built a Python/FastAPI automation platform for invoice intake, validation, supplier management, approval workflows, and audit-ready processing.
- Implemented REST APIs with SQLAlchemy, Alembic, Pydantic, SQLite/PostgreSQL-ready design, API key protection, audit logging, and structured error handling.
- Added production-minded reliability features including PDF magic-byte validation, idempotent uploads, invoice revalidation, stale approval expiration, and duplicate prevention.

OptimaTime AI

- Developed an AI-powered productivity and task scheduling platform using FastAPI, React, scikit-learn, REST APIs, SQLAlchemy, and Alembic.
- Built ML-based task prioritization and heuristic scheduling logic with explainable planning recommendations for user-facing productivity workflows.
- Demonstrated full-stack execution across backend APIs, machine learning integration, database design, explainability, and product-oriented problem solving.

EDUCATION

Vistula University

Warsaw, Poland

Mar 2026

Bachelor of Engineering in Computer Engineering, Specialization in Artificial Intelligence

CERTIFICATIONS

AWS Certified Machine Learning – Specialty | IBM Machine Learning with Python | Microsoft Advanced AI & ML Techniques and Capstone

LANGUAGES

Arabic: Native | **English:** Fluent | **French:** Fluent
